WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut 240 x 88 mm from 6 mm plate; square, deburr, break the edges.

Ten 4.5 mm holes, 5 mm in from the long edges, at 8, 64, 120, 176 and 232 mm from the rear end (the same positions as the rim).

Drill the lid and the hull rim together if you can (clamp, spot through, then tap the rim M4).

Pressure-test port: 8.5 mm hole tapped M10 x 1, 30 mm from the rear end, on the centre line.

Underside flat to 0.1 mm over the O-ring land; no scratches across it.

Fit: sits flush on the rim, O-ring in the rim groove, ten M4 x 12 pan-head screws tightened evenly in a cross pattern.

Check: the lid lies flat on the rim with no rock before the O-ring is fitted.
