WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut two 230 x 53 mm from 3 mm sheet; round the corners 3 mm.

Measured from the rear end and up from the bottom edge:

shaft hole 10 mm at 18 along, 26 up (retains the lip seal);

gearbox screws 4.5 mm at 10 and 38 along, 43 up;

idler hole 6.4 mm at 218 along, 26 up;

ballast screws 4.5 mm at 58, 118 and 178 along, 6 up.

Countersink all five screw holes on the outer face (90 degrees) so the heads sit flush: the belt runs 2 mm away.

The left plate is the mirror of the right: drill them as a pair, then countersink each on its own outer face.

Fit: inner face flat on the hull side and the ballast side, top edge

34 mm below the hull top, rear end 2 mm in from the hull's rear face.

Check: lay it on the hull side; every hole lines up with its partner.

CulvertCrawl track side plate (make 2, a left and a right): making sketch
