WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut 233 mm of 18 x 12 mm clear acrylic tube; square both ends.  
Root end: solvent-weld a 12 mm acrylic plug 3 mm deep.  
Drill a 3 mm hole in the underside 8 mm from the root end for the laser's wires; seal it with clear silicone after threading them.  
Fit: the root end sits 37 mm in front of the hull's front face, 7 mm clear of the dome. Solvent-weld the tube along the fin's top edge, on the camera axis 62 mm up.  
The front end goes 10 mm into the diode housing (bond with epoxy).  
Keep the tube clean and unscratched: the camera looks through it.
