WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut 104 mm of 225 mm PVC pipe; square both ends on a disc sander.

Tether entry: a 10 mm hole through the wall, mid-width; round its edges so the tether cannot chafe.

Fit: clamped between the two flanges by the four tie rods; it does not need glue.

Capacity: 60 m of 7 mm tether in about six layers, leaving 5 mm of flange above the top layer.

Check: both ends square to the pipe axis within 0.5 mm.
