WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut two 320 mm discs from 6 mm HDPE (router on a pivot, or jigsaw and sand). Mark the centre.

Centre hole 20.4 mm for the axle.

Four 6.4 mm tie rod holes on a 200 mm circle, at 45, 135, 225 and 315 degrees.

Four 5.5 mm hub holes on a 38 mm circle, at the same angles (check against the hub you buy).

Fit: one each side of the drum, tie rods through both, nuts and washers outside; the shaft hub bolts to the outer face.

Check: the flanges run true within 2 mm when the reel turns.
