WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Hub: 14 mm of 28 mm round bar, bored 20 mm, with an M6 set screw.

Arm: 12 x 6 mm flat bar 83 mm long, screwed or welded to the hub, its far end 95 mm from the axle centre.

Handle: 18 mm round bar or a bought crank handle, 50 mm long, on an M8 shoulder bolt through the arm 90 mm from the axle, free to turn.

Fit: hub on the left end of the axle, against the bearing; set screw onto a flat filed on the axle.

Check: the handle turns freely on its bolt.
